

A packet of one hundred \$100 bills is less than 1/2" thick and contains \$10,000. Fits in your pocket easily and is more than enough for week or two of shamefully decadent fun.

Believe it or not, this next little pile is \$1 million dollars (100 packets of \$10,000). You could stuff that into a grocery bag and walk around with it.

While a measly \$1 million looked unimpressive, \$100 million is a little more respectable. It fits neatly on a standard pallet...

And \$1 BILLION dollars... now we're really getting somewhere...

Next we'll look at ONE TRILLION dollars. This is that number we've been hearing so much about. What is a trillion dollars? Well, it's a million million. It's a thousand billion. It's a one followed by 12 zeros.

You ready for this?  
It's pretty surprising.

See the man on the lower left. And notice those pallets are now *double stacked*. So the next time you hear someone toss around the phrase "trillion dollars"... *that's* what they're talking about.
